

1 **ABSTRACT OF THE DISCLOSURE**

2 A head has a head portion and a connecting portion. The head portion is
3 adapted for receiving the ratchet mechanism and has an inner space, a mouth,
4 two side walls and an opening. The inner space is defined between the top and
5 the bottom to receive the ratchet mechanism of the power ratchet tool. The
6 mouth is defined in the front end and communicates with the inner space to
7 define the side walls between the top and the bottom. The opening is defined in
8 the bottom and communicates with the inner space for a stub of the ratchet
9 mechanism extending out from the opening. The connecting portion is
10 connected to the rear end of the head portion for being attached to the handle of
11 the power ratchet tool. Accordingly, a head with an enhanced structural strength
12 is provided.
